Four CompactFlash Card Slots

Built-in Powered Hub

High-Speed USB 2.0

UDMA Enabled

ImageRouter[®]

Easily Download All Your CompactFlash Cards at Once.

Delkin's ImageRouter provides professional photographers with a complete file import system specifically designed to improve workflow efficiency. The ImageRouter has four CompactFlash card slots and a built-in powered hub allowing you to transfer data from multiple memory cards at one time. UDMA enabled, the rugged, durable ImageRouter was designed with the professional photographer in mind. It is more than just a reader, it is a desktop assistant.

ImageRouter

Constantly having to load and unload cards from a reader means you are tied to your computer desk after a shoot. The ImageRouter greatly improves workflow efficiency by allowing you to concurrently transfer data from as many as four CompactFlash cards.

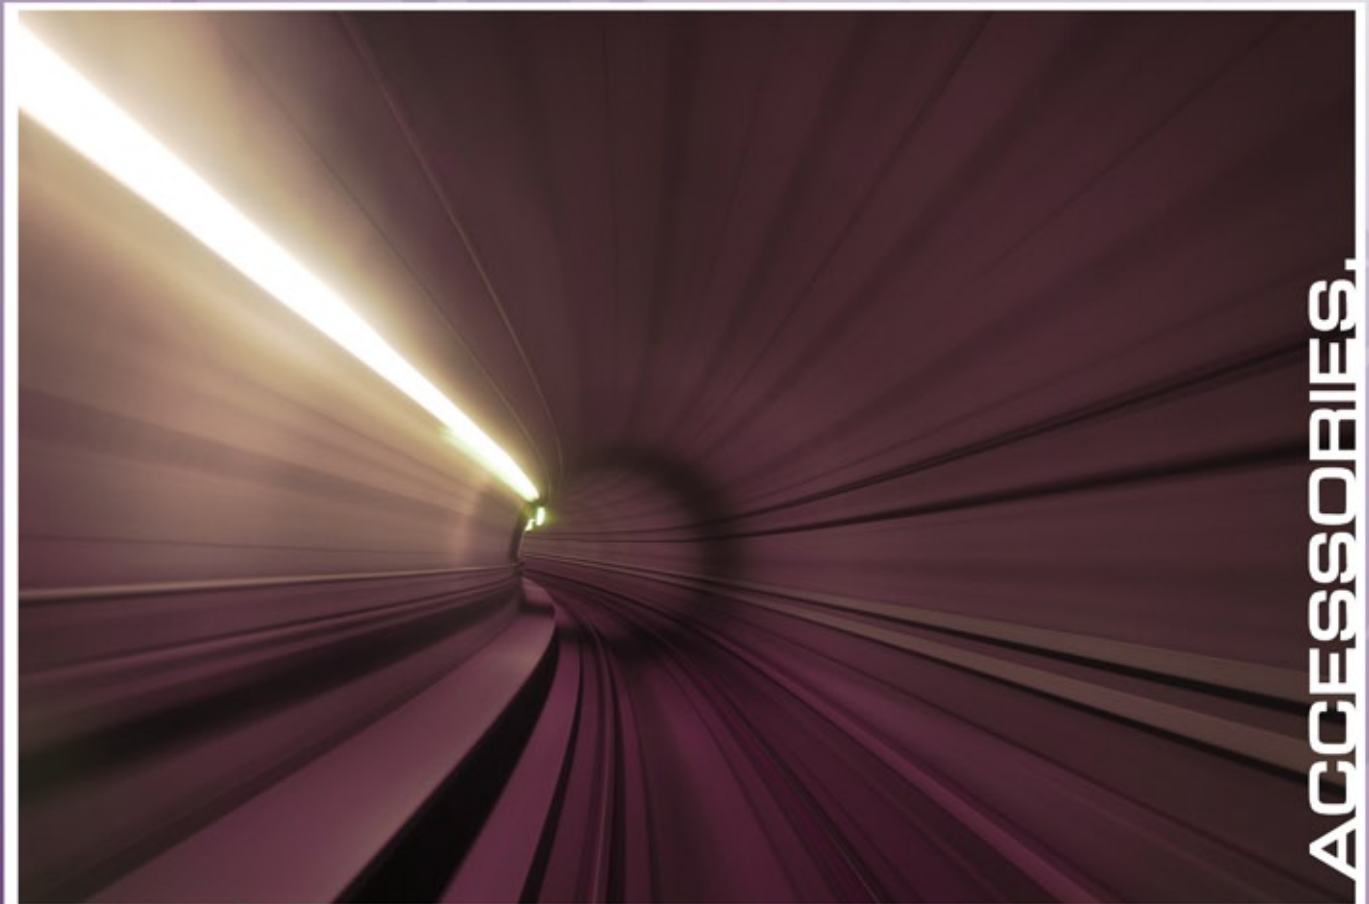

More than four cards? ImageRouter's built-in hub actually allows you to "daisy-chain" multiple units. All you have to do is plug two units together, insert the additional cards and walk away!

ImageRouter can be purchased individually, to be used with your file import software of choice, or in a bundle with BackupandBurn software.

BackupandBurn

BackupandBurn is capable of automatically renaming and filing images based on your parameters. Images can be renumbered, sent to different folders and copied to multiple locations automatically. Once the files are on a computer BackupandBurn can then automatically burn your images to disc for storage. With built-in security features like Image Verification, photographers can trust that their images are safe.
