

# SensorScope™ System

Soft, Safe Brush Tip

Light

Dual Speed Motor

## SensorVac

The SensorVac is the first step in safely and completely removing any loose, abrasive particles present in the camera or on the sensor. Powered by a convenient USB port and equipped with a light and a soft, non-shedding, static-free brush tip. SensorVac is completely safe for your image sensor.

Wand

## SensorSafe Wands

SensorSafe Wands eliminate all small dust particles and chemically bonded debris. Each wand head is wrapped in a soft, non-abrasive, lint free fabric with a unique double sided wet/dry design and wicked heads that effectively eliminate streaks and draw excess liquid away. SensorSafe Wands are available in three of the most common digital SLR sensor sizes: Large-24mm-full frame, Medium-20mm range, and Small-16mm range.

## SensorSolution

Used with the SensorSafe Wands, this scientifically developed SensorSolution works to break all chemical bonds that cause dirt, dust, oils, and debris to adhere to the sensor surface. This quick drying formula is streak free, alcohol free and safe for all air travel.

Air Safe

### SensorScope System

The SensorScope Cleaning System offers photographers the only comprehensive method for cleaning ALL types of sensor contamination no matter what the contaminant is or where it came from. Best of all, it is completely safe, 100% effective, and easy to use.
